

Maintaining your Guttering and Downpipes

Maintenance

Osma Rainwater System is designed to be maintenance-free.

However, in wooded or leafy areas, gutters should be periodically checked to ensure that gutter and pipe have not worked loose or become blocked.

Use hot soapy water with a capful of bleach in the water to clean the guttering and downpipes at least once a year

It is important that the guttering is cleared once a year of any debris, to avoid any blockages. This will reduce any leaking joints and extra wear & tear on the rubber seals.
