

Maintaining your PVCu Windows & Doors

Maintenance

Now you have your new PVCu products in, it is important that you carry out a maintenance check on them twice a year and we have listed them for you below

- Clean your PVCu windows, doors & conservatory with hot soapy water and a capful of bleach does no harm as this will break down the grim on the surface. Do not use any abrasive cloths or abrasive cleaning creams
- The glass surface can be cleaned with a ammonia based glass cleaner, this helps avoid a build of grime on your new glass surface
- All drainage holes should be kept clean so that the drainage system can get the flow of any water away in heavy storms we experience
- All locks, window hinges, & door cylinders should be sprayed with a silicone lubricant or WD40 at least twice a year. See the relevant link on our website for each individual requirement
- Wipe all stainless steel window hinges down with hot soapy water and the locking system
